

ABSTRACT

Disclosed is a hair conditioning composition comprising by weight: (a) 0.01-10% of a mono-long alkyl quaternized ammonium salt cationic surfactant; (b) 2-20% of a high melting point fatty compound; (c) 0.001-4% of a polysorbate; and (d) an aqueous carrier. The hair conditioning composition of the present invention can provide clean feel during and after rinsing the hair, while providing improved conditioning benefits to the hair.
